

START UP GUIDE

HOT TUBS

Start up your hot tub by following these quick steps for safe, smooth and efficient operation.

PDC Spas
PERFORMANCE • DESIGN • COMFORT
pdcspas.com

1 Make sure swim spa has GFCI, and proper wire size. (Copper wire recommended.)

2 Ensure the hot tub is level, is level on a solid, weight supporting concrete base, using shims to fill any gaps between hot tub and concrete base.

3 Fill hot tub to bottom of pillows.

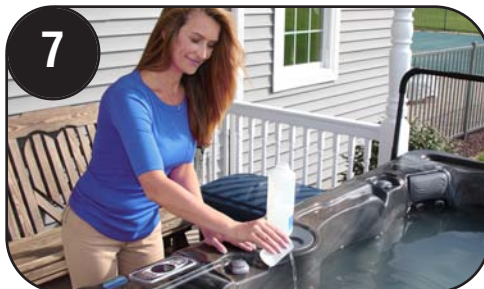

4 Bleed air out of system by using filter air relief knob and partly unscrewing diverter to release air reclose air relief knob & screw diverter top back down on.

5 Turn on power to the hot tub.

6 Run pumps one at a time to ensure all air is out of system.

7 Add chemicals according to directions.

8 Set filtering time at least 12-16 hours in a 24 time.

9 Set desired temp between 80 degrees and 104 degrees.

10 Cover the hot tub when not in use and lock cover.

11 Turn off all air controls when not in use.

12 Keep temperature at constant set point.
